JavaScript Security

In this Specialization, we will investigate, prevent, and resolve JavaScript-related attacks and learn how to build safer JavaScript applications. JavaScript is a fundamental technology for building web applications and is also popular for building server-side, desktop, and even mobile applications. Most of this learning Specialization will cover front-end JavaScript; however, we will also consider Node.js. After completing this Specialization, you will understand the diverse threats and protections of the JavaScript world.

Infosec Instructor

The online specialization named in this certificate may draw on material from courses taught on-campus, but the included courses are not equivalent to on-campus courses. Participation in this online specialization does not constitute enrollment at this university. This certificate does not confer a University grade, course credit or degree, and it does not verify the identity of the learner.
